(a) Free cash flow is defined as cash flow from operating activities excluding the change in our asset-securitization-program balance, less capital expenditures, all of which are calculated in accordance with GAAP. We believe that free cash flow provides a useful measure of our liquidity. We use free cash flow as a measure of cash available to fund early or required debt retirement and incremental investments such as, but not limited to, acquisitions and share repurchases. However, free cash flow has limitations in that it does not represent residual cash flow available for discretionary expenditures. Some of our expenditures are mandatory. The amount of mandatory versus discretionary expenditures can vary significantly between periods. We have also shown free cash flow excluding pension contributions in order to have a comparable liquidity to prior years when no pension contributions were made.
